Science News – Living Eggs

During the first two weeks of this term, all classes R – 7 shared in a wonderful experience. We were lucky enough to have “Living Eggs” provide the school with 10 fertilized chicken eggs, an incubator and brooder box. Nine of our eggs hatched into healthy little chicks who delighted and entertained us for a week. These chicks have supported our teaching of the “Life Systems” strand of Science. Thanks to all families who “adopted a chick”. We will be getting another batch of eggs in weeks 5 and 6 so more classes can observe them hatching.
